

The screenshot shows a Windows XP desktop environment. A terminal window is open in the foreground, displaying a netcat listener on port 5555. A connection is established from 192.168.1.101. The user enters the command 'ls -la' to list the contents of the remote directory. The output shows a list of files and directories, including 'C:\Program Files\Internet Explorer\iexplore.exe' and 'C:\Windows\system32\cmd.exe'. The terminal window is titled 'root@kali: ~'. The desktop background is the Windows XP logo. A system tray icon in the bottom right corner shows the system clock as 12:00 PM on 12/22/2019.
